Profile

Fullstack Developer

React | Next.js | React Native | TypeScript | JavaScript | Node.js | Python | Kotlin | GraphQL | MongoDB | PostgreSQL | Web automation | CMS Integrations

I've always been passionate about tech, learning and adapting to new technologies and tools. With this I can describe my aptitude towards my career and goals.

I started my career as a Frontend developer, so that's why I describe myself now as Fullstack Frontend focused developer. With expertise in a wide range of technologies, I am quite familiar with React, Next.js, TypeScript, JavaScript, Node.js, Express, GraphQL, MongoDB, relational and non relational databases, and Content Management Systems (CMS) integrations.

Let's collaborate!

Employment History

Fulls-stack Developer, Eddie Bauer / Reebok from Sparc Group (as vendor from Nulogic.io), (US) Remote

- Part of a team of 5 people in charge to implement the new payment methods to integrate Vertex, a tax platform to calculate and manage taxes for US and Canada on the e-commerce website <https://www.eddiebauer.com/> / <https://www.eddiebauer.ca/>
- Complete implementation of the experience from the integration with Vertex tax platform and internal microservices for order data management to deployment on the website and complete redesign of the checkout process on the e-commerce website.
- Implemented the Adventure Rewards project, Gift Card (Buyatab), and redesign of the user experience on the checkout process pages. End to end.
- Klarna integration as a payment method so the user could buy with credit

Full-stack Developer / Mobile Developer, Walmart Chile (as vendor from Nulogic.io), Santiago, Chile (remote) +

- Support on the legacy Order Management System using C# and .NET
- Part of the team in charge to migrate the legacy OMS to use a decentralized system based on events from Apache Kafka and Python.
- Monitored the checkout orders on OMS database using SQL
- Managing order event driven system from Kafka topic messages and monitoring using Azure Logs

- Implementation new features and redesign for ecommerce portal, as a Frontend ReactJS Developer.
- Implementation of DataLayer actions on the entire website.
- Creation of Cart and Checkout process.

- Verify identity of clients for customer portability.
- Development reusables react components to be used across the entire website.
Creation of Home, Account, PLP and PDP pages
- Project Delivery and Support.

Full-stack Developer, Nulogic.io, Santiago (Remote)

POCs:

ADO (MX)

3 weeks.

Tech Stack: Nextjs, TypeScript, LifeRay, Material UI, MongoDB, AWS

- Built a proof of concept needed to clarify doubts and get the contract for ADO client.
- Coordinated a team of 4 people to create the demo website using Nextjs end to end to meet the desired requirements, from the home page/landing to checkout and payment, and dynamic blog pages using Liferay as CMS.

Claro (Chile)

1 week

Tech Stack: Nextjs, TypeScript, Contentful, Commercetools, Algolia

- Leading a small team of 4 people to complete and deliver the proposal on the minimum amount of time determined to present the proof of concept.
- Contentful CMS integration through their context context delivery API to show the ability to create dynamic pages with live changes and content management.
- Commercetools platform integration to obtain the list of products with details and business data for the orders.
- End to end flow, starting from Homepage, search, PLP, to the checkout and order confirmation. SMS service integration to send an sms to confirm the client identity as required on the client's proposal.

Express (US)

1 week

Tech Stack: Nextjs, TypeScript, Commercetools

- Coordinated a small team of 3 people to develop the proposal. Demonstration of the use for a website through a base template to use it with dynamic content. One with Commercetools integration to show their functionalities, y another one using Express internal APIs for handling and populating the data, to show their differences.
- End to end. starting from Homepage, search, PLP, PDP, to the complete checkout.
